

# Assignment: 1

## Question and Instructions

Pingala currently allows students to browse, register, and manage their academic courses. Your task is to design a new AI feature that recommends courses to students based on their academic history, degree requirements, interests, and performance.

Your solution should:

- Clearly implement the HAX guidelines.
- Explain how you implement a guideline in your design.
- If a guideline does not apply, you need to argue why.
- Your designs need to be complete and legible.

Other instructions:

- Work in pairs.
- One submission per pair (as a single PDF) showing the mockups as well as an explanation for each guideline (how it is implemented, or why not).
- Mention both student names and roll numbers.
