

## **Assignment-5: User evaluations of Pingala course recommendation prototype**

Due on: Oct 26, 2025, 23:59

### **Assignment Question and Instructions**

The homework involves conducting usability evaluation of your Pingala course recommendation prototype from assignment 2.

What to do:

1. Test your prototype with three participants (1 classmate, make observations; 2 not classmates, make observations + recordings; recordings turned in as evidence). Each participant interacts with prototypes independently.
2. Conduct a lightweight thematic analysis of what you found, and report them as results.

Turn in a report with:

1. Tasks and procedure
2. Links to participant videos / observations notes
3. Evidence of analysis (themes, counts, which participant)
4. Findings, as a list of usability problems.
